

Tic-Tac-Toe

In the project, I implemented the game tic-tac-toe in C.

```
How many players?  
1. 1 player  
2. 2 players  
1  
  
Please choose how many rounds for a win:  
2
```

At first, the player chooses if to play another player or against the computer.

Then they need to choose how many rounds to play.

```
-----  
Round 1  
-----
```

```
  |  |  
-----
```

```
  |  |  
-----
```

```
  |  |
```

```
Please enter your move (row and column): 1 1
```

```
x |  |  
-----
```

```
  |  |  
-----
```

```
  |  |
```

```
The computer chose row = 3 and column = 3
```

```
x |  |  
-----
```

```
  |  |  
-----
```

```
  |  | o
```

The player enters a move and then it's the computer's turn (or the other player's turn).

They will play until there is a winner for the round, and game ends after playing all the rounds.
